AI Usage Log

Platform: Gemini

Model: Gemini

Interaction 1

User

[Uploaded 3 images containing assignment instructions and specification details for implementing a list-based MaxHeap priority queue to prioritize emails for a company CEO based on sender category and date.]

Assistant Summary

Provided a Python implementation of a custom `MaxHeap` data structure created from scratch without external heap libraries, along with `Email` and command-processing logic matching the sample test file and terminal output specifications.

Interaction 2

User

Rewrite the program in C++, please

Assistant Summary

Rewrote the entire program in C++, implementing a custom list-based `MaxHeap` using `std::vector` and implementing email category/date priority comparison and text command parsing matching the sample input and output format.
